

13. Discontinue heating.

1. Desired contact between the liquid and vapor phase can be achieved by filling the column with metal pieces to have a large surface area.

14. Analysis

1. Recording volumes of (A), (B) and (C) receivers using gradual cylinder
2. Allow liquid in column to drain into distillation
3. Record volume of pot residue

Gas Liquid chromatography for each sample (A), (B) and (C) as directed by instructor

*what about excel ??*

4. Results and Observation
